Chronic Obstructive Pulmonary Disease (COPD)

Chronic obstructive pulmonary disease is a degenerative disorder of the lungs in which there is a reduced ability to expire air. COPD includes a combination of lung diseases such as asthma, chronic bronchitis, and emphysema.

Chronic obstructive pulmonary disease affects at least 15 million Americans. The majority of people diagnosed with COPD can be directly related to former heavy or current cigarette use. However, not all who smoke get COPD. Obstructive lung disease develops in 10-15% of all cigarette smokers and individuals who continue to smoke cigarettes are more likely to sustain a rapid progression of the disease than non-smokers.

The most accurate method of diagnosing COPD is the pulmonary function test, otherwise known as a spirometry test. It measures the amount of forced air exhaled into a tube. FEV₁ is the maximum amount of air exhaled during the first second of a forced exhalation. The results help determine the severity of the COPD for the underwriter. The average non-smoking adult shows a decline in FEV₁ of 20-25 ml per year whereas the average heavy smoker declines 40-45 ml per year.

For underwriting purposes, it is imperative to determine the severity of COPD by having the ability to review the results of a spirometry test. COPD is classified into four groups: mild, moderate, severe, and extreme. The chart below helps define each group of COPD by symptoms, medication, % FEV₁ compared to normal, and includes the expected rating class.

<table>
<thead>
<tr>
<th>Degree</th>
<th>Symptoms</th>
<th>Rx</th>
<th>FEV₁</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mild</td>
<td>None–except for occasional throat clearing and respiratory infection</td>
<td>None</td>
<td>60-80%</td>
<td>B</td>
</tr>
<tr>
<td>Moderate</td>
<td>Airway obstruction on moderate exertion such as climbing two flights of stairs</td>
<td>Inhaler</td>
<td>50-60%</td>
<td>D</td>
</tr>
<tr>
<td>Severe</td>
<td>Shortness of breath with activity such as dressing, walking one block</td>
<td>Steroids, multiple medications</td>
<td>40-50%</td>
<td>G</td>
</tr>
<tr>
<td>Extreme</td>
<td>Disabled, shortness of breath at rest or minimal activity</td>
<td>Home oxygen</td>
<td>&lt;40%</td>
<td>Decline</td>
</tr>
</tbody>
</table>

These rating schedules relate to individuals who have been diagnosed with COPD and have discontinued cigarettes.

To get an idea of how a client with a history of COPD would be viewed in the underwriting process, please feel free to use the Ask “Rx” pert underwriter on the reverse side for an informal quote.

If your client has a chronic pulmonary (lung) disease, please answer the following:

1. Type of lung disease:
   - ☐ chronic bronchitis
   - ☐ emphysema
   - ☐ restrictive lung disease
   - ☐ asthma

2. Please list date when first diagnosed: __________________________________________________________
   - ☐ no

3. Has your client ever been hospitalized for this condition?
   - ☐ yes, please give details _________________________________________________________________
   - ☐ no

4. Has your client ever smoked?
   - ☐ yes, and currently smokes ____________________ (amount/day)
   - ☐ yes, smoked in the past but quit ___________________ (date)
   - ☐ never smoked

5. Is your client on any medications (include inhalers)?
   - ☐ yes
   - ☐ no

6. Have pulmonary function tests (a breathing test) ever been done?
   - ☐ yes, please give most recent test results __________________________________________________________
   - ☐ no

7. Please note client’s build:
   Height ___________________     Weight ___________________

8. Does your client have any abnormalities on an ECG or x-ray?
   - ☐ yes, please give details _________________________________________________________________
   - ☐ no

9. Does your client have any other major health problems (ex: heart disease, etc.)?
   - ☐ yes, please give details _________________________________________________________________
   - ☐ no
